A thermal differential analysis showed that normal  
paraffin waxes with a lower molecular weight can give  
rise to two transition phenomena, while those of higher  
molecular weight show only one, and that the value of  
the transition phenomenon is influenced by the speed of  
cooling of the sample. Iso-paraffin waxes show trans-  
formation phenomena at the solid state in a manner  
analogous to normal paraffin waxes. (See also
